

HAVENTEC SANCTUM

haventec

Private information security

One-click secure transactions that
don't cast a data shadow

HAVENTEC SANCTUM FOR CONSUMERS: SIMPLER, SAFER, MORE CONVENIENT

Haventec Sanctum decentralises private records and credit card data, offering better protection for individual users:

- You keep control of your own sensitive data on your own secure devices
- Personal information (including credit card details) and security keys are kept apart
- Merchants and other organisations do not store your personal credit card information or other private records
- Each transmission of sensitive data is verified with a unique one-time key that is instantly discarded
- The system builds profiles of your safe behaviour and asks for extra authentication to allow or block non-normal behaviour
- Sanctum won't record what you bought or how much you paid (unlike other payment systems)

HAVENTEC SANCTUM FOR CREDIT CARDS: DECENTRALISING PAYMENT DATA

We've decentralised sensitive data so businesses can allow customers to keep control of personal credit card information.

By removing the need for businesses to collect and store customers' sensitive data, we're easing the burden of PCI compliance – and cutting fraud risk.

Now your business can easily offer the convenience of one-click payments, without extra hassles:

- No lock-in contracts for third party payment processing systems
- No traditional tokenisation of credit card information
- No need for customers to install new software or get hardware add-ons
- No liability of a central store (or 'honeypot') of credit card information

Haventec Sanctum removes the burden of storing and securing sensitive information, while maintaining your customer's security and privacy.

MORE PRIVACY

Businesses can build trust and offer a better customer experience by giving you back control of your:

- identity
- financial details and
- other private information.

Haventec Sanctum allows them to do exactly that.

Businesses can now confirm data is authentic without having to store your personal information. Sanctum cuts fraud risk for them and makes doing business safer for you.

HAVENTEC IS DECENTRALISING CYBER SECURITY

Haventec was founded in Australia by a highly experienced team with extensive success in commercialising technologies that solve real world challenges.

Our company values are all customer focused:

- 1) **Decentralise** critical information
- 2) **Reduce** organisations' security risk
- 3) Create a **trusted** and **frictionless** user experience
- 4) **Simplify** operations and lower cost

Seems simple? It's our job to make it so.

**MAKE PAYMENTS SIMPLER AND MORE SECURE WITH HAVENTEC SANCTUM.
ASK US HOW.**
